

Subject: Application for Working Student – ServiceNow Platform Team

Dear Hiring Manager at Kronos AG,

When I read your posting, it honestly felt like something I have already been doing, just under a different title.

In my current role as a Production Support Engineer, I spend my days understanding why systems fail and making sure they do not fail the same way again. I work closely with data, write SQL queries to trace root causes, and improve monitoring using tools like Splunk and Grafana. I also handle a high volume of incident tickets, turning scattered information into clear insights that teams can actually use.

What drew me most to this role is the mix of structure and curiosity it requires. Supporting platform governance, analyzing usage, and exploring new features is exactly the kind of work I naturally enjoy. I already have some exposure to ServiceNow through incident workflows, and I am genuinely interested in going deeper, not just using it but understanding how to improve and shape it.

I am currently pursuing my Master's in Data Science in Germany and I am looking for a role where I can contribute meaningfully while continuing to grow. I am comfortable working across technical and non technical contexts, and I take ownership of my work whether it is a small task or a complex issue.

More than anything, I care about doing work that matters and doing it well. That is why this opportunity stood out to me.

I would really value the chance to speak with you.

Warm regards,

Anchal Pathania
